

We are a growing supplier of fibre optic sensors based on fibre Bragg gratings (FBGs). We provide customers worldwide with sensor solutions for measuring strain, pressure, temperature, and shape. Measuring what was not measurable before - our solutions are used in the application areas where conventional measurement solutions reach their limits. With exciting projects from research and industry, you will help shape the fibre sensor technology of tomorrow at FBGS. More than 35 employees from over 17 countries work at our sites in Jena (Germany) and Geel (Belgium).

We want to strengthen our production team in Jena and are looking for you as a

Working Student (m/w/d)

- An appreciative corporate culture, team events
- Flat hierarchies
- Fair payment

Workplace:

- Jena (Germany)

FBGS, a spin-off of the IPHT Jena, combines the innovation spirit with entrepreneurship. We work on precise and economical measurement technology that makes healthcare applications gentler, processes more efficient and infrastructures safer. Developing ideas, implementing them in line with market requirements and continuously developing them further are at the core of our innovative strength. In dynamic and interdisciplinary teams, we offer you individual development perspectives as well as flexibility in shaping your work. Respect, appreciation and cooperation determine our actions every day. We think and act for the long term, stand behind our employees and support them in balancing work and family life. We strive to increase the proportion of women and expressly welcome applications from women.

FBGS – where I belong.
